MAITRI DIWAN

Ahmedabad, Gujarat, India | Phone: +91 7990315119 | Email: maitridiwan19@gmail.com | LinkedIn: linkedin.com/in/maitri-diwan-7a8762226

PROFESSIONAL SUMMARY

AI-Powered Full Stack Software Engineer with hands-on experience in MERN stack technologies (MongoDB, Express.js, React.js, Node.js) and TypeScript, building responsive web applications, RESTful APIs, and database-driven solutions. Experience contributing to enterprise applications at Bacancy Technology, including a real-time auction platform, a SAP-integrated expense management system, and a game-server hosting platform, focusing on frontend development, API integration, and application reliability. Leverages AI-assisted development tools such as ChatGPT, GitHub Copilot, Claude, and Cursor to accelerate delivery, improve code quality, and streamline debugging. Proficient in SDLC, Agile, Git, API integration, and performance optimisation.

EXPERIENCE

Software Engineer - Bacancy Technology *Jan 2025 - Present*

Bacancy Technology, Ahmedabad, India

- Built and maintained scalable, responsive UI modules using React.js and TypeScript, integrating REST APIs and managing application state with Redux Toolkit.
- Designed backend RESTful APIs using Node.js and Express.js, collaborating cross-functionally in Agile sprints to debug and optimise performance.

KEY PROJECTS

Bacancy Auction

Technologies used: React.js | TypeScript | Redux Toolkit | MUI | Node.js | Express.js | PostgreSQL | REST APIs

- Built responsive, real-time auction platform enabling users to create, manage, and bid on live auction events with instant updates.
- Integrated REST APIs and Redux Toolkit for state management; built reusable components, authentication, and protected routes.

Iceline Hosting

Technologies used: Next.js | TypeScript | Tailwind CSS | Golang | PostgreSQL | Nomad Cluster | Consul | MinIO | Amazon S3

- Developed core UI and handled API integration for a game-server hosting platform built on a microservices architecture (auth, gs-manager, fs-manager).
- Collaborated in a 3-member team on GS integration and file-server manager services, managing role-based access control and direct client communication.

Rolling Arrays - Reimburse

Technologies used: React.js | Python

- Contributed to an enterprise expense reimbursement and claims platform integrated with SAP, covering claim creation, approvals, audit logging, and reporting across tenants and currencies.
- Fixed bugs in split expense flows, foreign currency precision, approval remarks, and configuration/UI issues across approval and request flows.

Kidzcamp

Technologies used: React.js | Express.js | Redux Toolkit | MUI | Cloudinary | MongoDB

- Built a centralized admin panel for a multi-vendor kids activity marketplace, managing vendors, events, bookings, and payments via a role-based dashboard.
- Implemented role-based access control, REST API integration, multi-step form workflows, and media uploads via AWS S3.

SKILLS

- Languages: JavaScript, TypeScript, HTML5, CSS3
- Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, Bootstrap, Material UI, Shadcn
- Backend: Node.js, Express.js, Prisma, REST APIs
- Databases: MongoDB, PostgreSQL, MySQL, Supabase
- Tools: Git, GitHub, Bitbucket, VS Code, Cursor, Postman, Swagger, Jira, Trello
- AI-Assisted Development: ChatGPT, GitHub Copilot, Claude, Cursor

EDUCATION

B.E., Information Technology - Vishwakarma Government Engineering College **Sep 2021 - May 2025**

CGPA: 8.57 *Ahmedabad, Gujarat, India*

H.S.C (12th) - Sardar Patel and Swami Vivekanand High School **Apr 2020 - Jun 2021**

85% *Ahmedabad, Gujarat, India*
